

# CARE & MAINTENANCE OF YOUR POWDER COATED PRODUCT

Maintaining the integrity of your powder coated products is just like caring for your car and is a smart way to protect your investment. Over time with exposure to the elements, powder coatings will show signs of weathering. A simple regular clean will remove surface dirt, grime and other build ups that affect the powder coat surface. Frequency of cleaning depends on the environment and by following the cleaning program your product will outlast the warranty offered.

If your product is sliding or hinged regular checks of the moving parts are advised, Do Not oil or use lubricant on the track, rollers or hinges – oil will attract dust and build up causing premature wear. For the following environments cleaning must be completed regularly to maintain your warranty.

**Beach Front** - for all buildings within in one (1) kilometre of the beach,

- A. Monthly rinse
- B. Three monthly wash with warm soapy water – rinse after wash

**Industrial** - for all buildings in industrial areas and high traffic areas close to main roads

- A. Monthly Rinse
- B. Three monthly wash with warm soapy water – rinse after wash

**Domestic** – for house hold products more than 1 kilometre from the beach and areas with no air born pollutants.

- A. Three monthly rinse
  - B. Six monthly wash with warm soapy water – rinse after wash
- In all instances an annual visual inspection of the product should be carried out and any signs of product deterioration should be reported to Procoat Industries.

Cleaning & maintenance schedule to be logged with your approved applicator.
